

Huntington's Disease (HD) is a progressively degenerative brain disorder that overwhelms both the mind and body. Symptoms include loss of emotional control, cognitive ability and movement. About 30,000 people in the United States have HD. More devastating still, it is hereditary. Each child of a parent with HD has a 50% chance of inheriting the HD gene. This means that over 200,000 people are at-risk for having HD.

Currently there is no cure and ultimately, it is fatal.

However, there is hope!

Research funded by HDSA is getting closer to discovering effective treatments to slow down and cure HD. Dollars generated by this event will help HDSA to continue to provide quality programs and valuable research.
